This Poster is brought to you for free and open access by the Nursing Research and EBP at RocScholar. It has been accepted for inclusion in Nursing Research and EBP Day 2022 by an authorized administrator of RocScholar. For more information, please contact Lisa.Buda@rochesterregional.org.
Evidence-Based Practice Liaisons: Supporting EBP across the Health System

Rebecca A. Hartkamp, MS, Evidence-Based Practice Liaison

What is Evidence-Based Practice?

- Best Research Evidence: Systematic search, Critical appraisal, Evidence synthesis (external evidence)
- Clinical Expertise: Personal practice experience, Outcome/evaluation data, Patient assessments (internal evidence)
- Patient Values: Patient value, preferences

Benefits of EBP

- Decrease costs while improving patient care, by:
  - Decreasing admissions and length of stay
  - Improving patient outcomes
- Targets Triple Aim:
  - Improving patient experience of care (quality & satisfaction)
  - Improving the health of populations
  - Reducing per capita cost of health

Current State, Future Recommendations

"By the year 2020, 90% of clinical decisions will be supported by accurate, timely, and up-to-date clinical information, and will reflect the best available evidence." - IOM, 2009

"... recommendations for primary care practice ... only 18% are based on patient-oriented evidence from consistent, high-quality studies." - IOM, 2007

2020-2022 EBP Initiatives & Accomplishments

Five modules offering a total of 14 CNEs. The modules are available on the EBP Website participante in a virtual journal club. 55% of respondents reported they were highly likely to participate in a virtual journal club. Virtual journal club planning is now underway.

EBP Developmental Levels

- Reactive: Practice is largely based on tradition or the way one was originally taught
- Responsive: Nurses generate questions about practice and occasionally use evidence to drive practice changes
- Proactive: Practice based on latest evidence. Nurses identify issues and seek appropriate evidence
- High Performing: Nurses are developing and testing evidence and translating new knowledge into practice

RRH Professional Practice Model & Nursing Strategic Plan Supports EBP

How is the evidence to support primary care practice? - IOM 2006; EBP Committee 2017; IOM 2009
