## Rochester General Hospital Edition

October 2014

### Enterovirus D68

States with lab-confirmed  
EV-D68 infections as of  
Sept. 30 according to CDC.

Enterovirus D68 is one of many non-polio enteroviruses that can cause mild to severe respiratory illness. Symptoms may include fever, runny nose, sneezing, cough, body and muscle aches, and in more severe cases, wheezing and difficulty breathing. Infants, children, and teenagers are more likely to get infected with enteroviruses and become ill, yet adults can be affected as well. Enterovirus D68 is a possible cause of acute, unexplained severe respiratory illness, even in the absence of fever.

If you would like copies of any of these articles, or if you would like additional information on this or any topic, please contact any Werner Medical Library team member.

### Library Open House October 22

In honor of National Medical Librarians Month in October, the Werner Medical Library will hold an Open House on Wed., October 22, beginning at 1:00PM. Come and enjoy some punch and cookies in our recently renovated library. All team members are welcome.

### AORN Standards

The 2014 Perioperative Standards and Recommended Practices, also known as the AORN Standards, are available from the Resources A-Z list on our library [webpage](#). This ebook provides guidelines and recommended practices on aseptic practice, equipment and product safety, patient and worker safety, patient care, and sterilization and disinfection. These standards from the Association of periOperative Registered Nurses (AORN) are intended to guide perioperative practice and patient care.
