### Ebola

[Ebola Virus Disease in Africa, 1976 – 2014](#), (from the CDC).

Ebola virus disease (formerly known as Ebola haemorrhagic fever) is a severe, often fatal illness, with a death rate of up to 90%. It is caused by a genus of viruses called Ebolavirus, and first appeared in 1976 in two simultaneous outbreaks, one in a village near the Ebola River in the Democratic Republic of Congo, and the other in a remote area of Sudan. Ebola can cause disease in humans and nonhuman primates (monkeys, gorillas, and chimpanzees).

If you would like copies of any of these articles, or if you would like additional information on this or any topic, please contact any Werner Medical Library team member.
