Rochester General Hospital Edition

April 2011

MRSA (Methicillin-resistant Staphylococcus aureus)

MRSA is a major cause of complications and death, and is a serious problem for the health care industry. An estimated 126,000 patients develop MRSA infection each year, and over 5000 of them die as a result. The additional cost per infection is at least \$10,000 and the total cost of MRSA infections each year is around \$8 billion. If you would like copies of any of these articles, or if you would like further information on this or any topic, please contact any Library team member.
