HOSPITAL READMISSIONS

Hospital readmissions in New York State cost \$3.7 billion per year. 15% of all initial hospitalizations result in a readmission within 30 days, which translates to nearly 274,000 additional hospital stays. A significant proportion of re-hospitalizations could be prevented if systems were put in place aimed at identifying and

addressing some of the underlying issues that cause them. If you would like copies of any of these articles, or if you would like further information on this or any topic, please contact any Library team member.
