CELL PHONES - ARE THEY SAFE?

Are cell phones really dangerous? There are more than one billion cell phone users worldwide and the number is growing every day. Besides the hazards of exposure to electromagnetic radiation there is also the danger of drivers using cell phones. Using a cell phone while driving contributes to more than 2,600 deaths and 330,000 injuries in the US every year.

If you would like copies of any of these articles, or if you would like further information on this topic, please contact any Library staff member.
