RRH Library Newsletter, September 2006

Libraries at Rochester Regional Health
PATIENT SAFETY

Patient safety is defined by the Institute of Medicine (IOM) as the prevention of harm to patients. More than 100,000 Americans die every year and over $29 billion is spent annually due to preventable medical errors. If you would like copies of any of these articles, or if you would like further information on this topic, please contact any library staff member.
