DIABETES

Diabetes is a serious disease that affects the body's ability to produce or respond properly to insulin, a hormone that allows blood glucose (sugar) to enter the cells of the body and be used for energy. Nearly 21 million children and adults in the U.S. have diabetes. It is the fifth deadliest disease in the U.S. and it has no cure. If you would like copies of any of these articles, or if you would like further information on this topic, please contact any library staff member
