Recommended Citation

This Newsletter is brought to you for free and open access by RocScholar. It has been accepted for inclusion in Rochester Regional Health authored publications and proceedings by an authorized administrator of RocScholar. For more information, please contact Lisa.Buda@rochesterregional.org.
DEHYDRATION

Dehydration is the loss of water and salts essential for normal body function, and occurs when the body loses more fluid than it takes in. While everyone is at risk for dehydration, it is a leading cause of morbidity and mortality in children and the elderly worldwide. If you would like copies of any of these articles, or if you would like further information on this topic, please contact any library staff member.
